2 PhD positions

Two PhD positions are available at the Institute for Virology, University of Ulm, Ulm, Germany for the following projects: 1) impairment of monocyte functions during Human cytomegalovirus (HCMV) infection; 2) Characterization of the HCMV polymerase and its functions for replication and resistance development. We offer a highly interactive work environment in a modern research laboratory with excellent interactions with international research groups.

The projects are intended for an initial period of two years with a possible extension for a third year (scheduled start 1st of January 2007).

We invite applications for 2 PhD (BAT IIa/2) positions until the 1st of October 2006.

Candidate should have a degree in Biology or related subjects and a strong experimental background in molecular virology, molecular microbiology, cell biology and/or immunology.

Applications including 1) curriculum vitae and copies of degree certificates; 2) short description of recent research activities and methodically skills; 3) reference(s) or letter(s) of recommendation should be addressed by email or mail to:
